At Bug Doctor Being “GREEN” Is Just A Way of Life

GREEN programs are designed to reduce pest populations, reduce the volume of pesticides used, and provide an effective pest management program.

Bug Doctor follows the principals of “IPM” or Integrated Pest Management and uses a “Targeted Treatment Approach”.

An IPM Program Includes:

- Education
- Routine Inspections
- Pest Identification
- Monitoring pest populations
- Setting action thresholds
- Habitat modification
- Physical and mechanical control
- Biological control
- Pesticide applications

The Targeted Treatment Approach Mandates:

- The right treatment
- At the right time
- In the right place

What is a **GREEN** approach to pest control? Simply put, it is the wisest decision to prevent infestations. It is NOT the total absence of pesticides. We monitor likely infestation areas and treat only when necessary. When we must apply a pesticide, we choose a least toxic alternative. To sum up the I.P.M. approach: through proper identification and monitoring of pest populations we can reduce pesticide use. When it is necessary to use pesticides we can make low impact choices.

*Rest assured at Bug Doctor we’re growing **GREENER** every day!*
