

HERE'S HOW IT WORKS

The CoastalMister™ automatically delivers a fine, exactly measured spray of Pyrethrum-based insecticide through precision nozzles located in specifically designed protection zones throughout your outdoor living areas. Pyrethrum is a water based, biodegradable material derived from the Chrysanthemum flower and valued for its quick knock-down of mosquitoes and long history of effective use.

- The system is pre-set to mist at times when mosquitoes are most likely to be present and vulnerable.
- In residential settings, misting occurs one to four times daily for 30 seconds each time.
- Mosquitoes flying or resting in the protection zones are immediately hit with a lethal dose.
- Ongoing misting cycles create a repellency which keeps mosquitoes away.
- A remote control feature lets you make additional applications as needed.

THE SYSTEM CONSISTS OF

- 30, 55 or 125 gallon poly drum reservoir
- State-of-the-art electric motor and pump
- Electric timer that can start misting cycle by pre-set program, manual override or hand-held remote control
- Natural, black or white nylon tubing and nickel-silver anti-drip nozzles

1. Nozzles are installed under the eaves of your home.

2. Hand-held remote control allows you to activate your system from inside at any time.

3. Additional nozzles are placed in trees, landscaping and other likely mosquito breeding and resting sites.

5. The system can be expanded to protect areas not included in the original installation.

4. Pyrethrum-based insecticide is pumped from a tamper-resistant drum where pre-mixed solution stays fresh and effective.

SYSTEM INSTALLATION

THE INSTALLATION PROCESS INCLUDES

- Customer interview and thorough site evaluation to define coverage areas
- Identification and elimination or reduction of breeding and resting sites
- Design of misting system layout for creation of protection zones
- Installation of master unit, tubing and nozzles
- Testing of mist pattern to ensure adequate coverage
- Training on how to effectively and efficiently operate your system

Only specially trained and licensed pest control professionals are qualified to maintain and refill the systems. Always seek professional assistance for your pest control needs.
